

Where the Conversion Leaks Are

nomadinternet.com · CRO Recommendations · August 2026

The site's primary conversion mechanism is the coverage-check form, but it is undermined by multiple competing CTAs and ambiguous form labels, causing visitors to hesitate or abandon before entering their address. Consolidating to a single, clearly labeled coverage-check CTA and form will directly increase conversion.

How to read this

Findings marked **verified** were measured directly and are reproducible. Everything else is a hypothesis derived from inspecting the live pages, which is why the PXL evidence questions score zero for those items. Sized opportunities describe the prize if a change works, not expected revenue: roughly 10–30% of A/B tests produce a significant win, and winners tend to overstate their true effect.
